Service Manual

Energy Recovery Ventilator

FV-15VE1S

M WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

IMPORTANT SAFETY NOTICE :

There are special components used in this equipment which are important for safety. These parts are marked by \triangle in the Schematic Diagrams, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire or other hazards. Do not modify the original design without permission of manufacture. We suggest to handle such parts after the static electricity prevention. It is forbidden to touch the PCB parts by bare hands during the repairing process.

FV-15VE1S ---

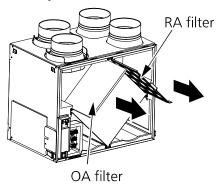

A CAUTION

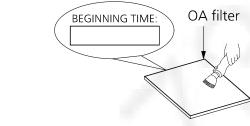

- Electric shock may result. Disconnect power by switching off main switch, then unplug before working on the unit. If a standby switch is connected, it is recommended to switch it off first.
- Routine maintenance must be performed every 2 or 3 months. clogged filters may cause condensation on the unit due to air flow reduction.
- Please wear gloves to avoid pinching fingers during maintenance.
- Please pay attention to dust, condensation water, or parts that may drop down when the door is opened.
- \bigcirc Never use gasoline, benzene, thinner or any other such chemicals to clean the ERV.
- \bigcirc Do not allow water to enter ERV.
- \bigcirc Do not immerse resin parts in water over 60 $^{\circ}$ C.
- 1 Open the door by unlocking the latches.

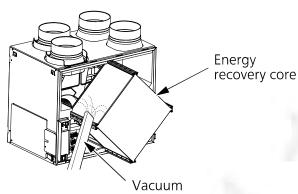

Clean the OA filter, RA filter and energy recovery core.

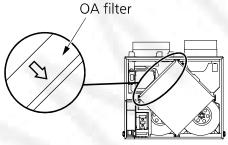

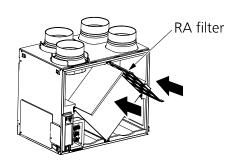

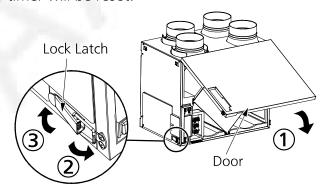

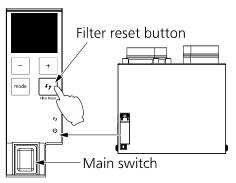

Reinstall the filters.

- 4 Reinstall and close door by locking the latches.
- Connect power and press filter reset button. When the unit beeps, the filter reset timer will be reset.

5. Troubleshooting

FV-15VE1S ---

If a problem is encountered, please investigate it by going through the following items. If the problem still persists, please disconnect the power and contact the dealer for repair.

ii persi.	, picas		nect the power and contact the dealer for repair.
Display			Action
_	Off	Off	 Check the power is connected. Check the door is closed. Check that the main switch on the product is on. Check if the spring on the inside of the door is damaged or deformed.
	On	Off	 ERV running interval according to the ASHRAE time setting. When outdoor temperature is very low ERV stops operating automatically.(see P.4) Damper may be frozen shut, please wait for maximum 24 hours for defrosting.
-	On	Off	■ Check the wiring connection. (P.6-7)
-	On	On	■ The RA filter and OA filter need to be maintained. If you do not want the buzzer notification, see configuration setting (p.16-17).
F03	Blink	Off	■ PCB error, please disconnect the power and contact the dealer for repair.
F10	Blink	Off	■ OA temperature sensor error, please disconnect the power and contact the dealer for repair.
F20	Off	Off	■ SA motor error, please disconnect the power and contact the dealer for repair.
F21	Off	Off	■ EA motor error, please disconnect the power and contact the dealer for repair.
F30	Off	Off	■ Damper error, please disconnect the power and contact the dealer for repair.
F60	Blink	Off	■ Supply air flow is significantly decreasing. Check the ducting and the filter.
F61	Blink	Off	Exhaust air flow is significantly decreasing. Check the ducting and the filter.
F01	Blink	Off	■ Wall control communication error. Check the wall control wiring.(P.6-7)
F04	Blink	Off	■ PCB communication error. Contact the dealer for repair. *
F11	Blink	Off	■ OA humidity sensor error. Contact the dealer for repair. *
F12	Blink	Off	■ RA temperature sensor error. Contact the dealer for repair. *
F13	Blink	Off	■ RA humidity sensor error. Contact the dealer for repair. *
F60	Blink	Off	■ Supply air flow is decreasing. Check the ducting and the filter.
F61	Blink	Off	Exhaust air flow is decreasing. Check the ducting and the filter.

^{*}Some functions will be limited when this error is encountered.

5. Troubleshooting

FV-15VE1S-

Problem	Display	Running indicator (Green)	Filter indicator (Orange)	Action
6.ERV behaves differently from the selected air flow settings.	-	Blink	Off	 When product runs in recirculation mode for frost prevention, the air volume will be more than setting and sound will be slightly louder than normal operation. When outdoor temperature is less than 14 °F (-10 °C), the product will restrict air volume automatically to protect energy recovery core.
